

MASTER B-ROLL

GOH CONSULTING

B-roll footage is a game-changer for enhancing the visual appeal and engagement of your content. This SOP covers how to effectively incorporate b-roll into your content.

The average human attention span is 8 seconds. To combat this, use b-roll to captivate and hold your audience's focus. By incorporating concise and engaging footage, you can significantly boost your chances of retaining viewer attention and conveying your message effectively.

What is B-Roll?

B-roll footage refers to supplementary video clips that complement your main footage, adding depth, context, and visual interest to your story. It can include cutaways, transitions, and additional scenes that enhance the narrative and keep viewers engaged.

Why use B-Roll?

- Break up talking heads: B-roll helps to diversify your content, breaking up monotonous talking-head segments and keeping viewers interested.
- Add context and depth: B-roll footage provides additional context, helping viewers understand complex concepts and ideas.
- Enhance storytelling: B-roll adds an extra layer of storytelling, allowing you to convey emotions, settings, and atmospheres.
- Increase engagement: B-roll keeps viewers engaged, encouraging them to watch until the end.

Types of B-Roll

- Emotion: faces, reactions, effort, feeling. Close-ups that connect the viewer to you as a person
- Context: establishing shots that set the world: the villa, the city, the space.
- Transition: motion and movement clips that carry the edit from one beat to the next and keep pacing tight.
- Proof: payment screenshots, testimonials, client wins etc.

Categorise everything you film into these 4 categories.

Emotion

Context

Transition

Proof

Tips for effective B-Roll

- Keep it relevant: Ensure B-roll aligns with your content and messaging.
- Use a mix of shots: Vary your B-roll with different angles, close-ups, and wide shots.
- Experiment with speed: Adjust the speed of your B-roll to match the tone and pace of your video.
- Don't overdo it: Balance B-roll with your main footage, avoiding overwhelming viewers.

Your B-Roll Shot List (Getting Started)

- Establishing shots of your workspace
- Footage of team members working
- Aerial/Drone footage of you
- Footage of you working
 - Writing
 - Drawing on whiteboard
 - On laptop
 - On phone
 - Hiking
 - Biking
- Footage of you in nature
 - Beach
 - Forest
 - Running
- Footage of you in the gym
- Footage of you reading
- Traveling
 - Airports
 - Villa shots
 - Swimming
 - Sunrise/Sunset
- Cutaways of computer screens
- Client interviews
- Dapping up team members/clients
- Team activities
- Team retreats
- Hanging out with the team
- Drawing on the whiteboard or mapping out a plan
- Filming content BTS
- Old footage in your iPhone over the years

- Milestone achievements (awards, recognition)
- Before-and-after footage
- Customer success stories
- How-it's-made footage
- Behind-the-scenes moments
- Emotions
 - Happy
 - Stressed
 - Sad
 - Focused
 - Thinking
- Payment Screenshots
- Payments on screen/phone

Organize Your B-Roll in [Frame.IO](https://frame.io)

The easiest way to create folders for your B-Roll is to make a list of all the activities, actions and emotions you do over the course of a month. These become your most commonly used B-Roll folders which you place your footage in. You can always create more organised folders as you film more footage.

How to Film B-Roll

Dedicated sessions, filmed in blocks.

- Book a dedicated b-roll session rather than grabbing what you can every time you shoot. (When time is tight, capture on the move, but a focused session is where the library gets built)
- For every moment, get multiple shot types:
 - a wide to establish the scene
 - a medium for the subject
 - and a close-up or detail for emotion
 - More coverage now means more edit flexibility later and fewer reshoots

Gear for B-Roll

Camera + Tripod	Locked-off establishing and static shots
Gimbal	Smooth movement, tracking, following a subject
Magic Arm	Creative and unique perspectives
Suction Mount	Car and window perspectives
Drone	Aerial and establishing shots

Shot Types & Framing

Wide	Establishes the space and the world
Medium	The subject in context, often the hero shot
Close-up	Draws the viewer in, the subject's expression

Extreme close-up	Emotion and texture: face, sweat, hands, detail
Detail / cutaway	The small stuff editors live on: textures, light, objects
Aerial / Drone	Location perspective
POV	Unique perspective on what's happening in the shot

Shot List Template

Use Your Storyboard to Create a Shot List

As you write the script in a Google Doc, add shot-list comments against each line.

Those comments become the storyboard and the B-roll list the team films against.

Example (B-Roll for Sweden Mastermind):

Shot List AI Prompt

You are a creative director building a cinematic B-roll shot list.

I'm a solo creator filming myself.

Location: [describe]

Time of day: [morning / afternoon / evening]

Mood: [calm / focused / intense / aspirational]

Platform: [YT \ IG]

Gear: [camera or phone, lenses, tripod / gimbal]

The video is about: [topic]

ICP: [who you serve]

Give me a shot list across the 4 B-roll categories:

Emotion

- faces, reactions, feeling; close-ups that connect

Context

- the environment and world around me; establishing shots

Transition - movement that cuts one shot into the next

Proof

- screens, results, the work; backs up my claims

For each shot give: subject, angle or movement, and location.

Mix wide, medium and close-up shots. Prioritise composition, lighting and depth.

Only concrete shots I can film - no generic

Where to find inspiration

- Save B-roll you love from creators you admire
- Build a swipe folder of shots, angles and transitions
- Pull from films, music videos and ads - not just coaches
