

REVERSE ENGINEERING VIRAL VIDEOS

GOH CONSULTING

Goal: Turn your best-performing videos into a repeatable engine for views and ICP leads, by systematically breaking down WHY they worked and re-running them as iterations instead of guessing at new ideas.

What this is

What is an Outlier: any video that performs 3-5x better than your average piece of content

This is the exact framework we follow to leverage our existing data and generate over 5 Million views every single month.

Every viral video that has ever worked can be broken down into a repeatable framework. Once you understand the framework, you can replicate the result.

Why this matters

Most creators treat every video as a fresh gamble. Every time they post, they're just throwing an idea at a wall and hoping it sticks.

An outlier is your audience telling you exactly which topic, hook, and format they respond to. These are proven patterns you can double down on in your organic to generate predictable results.

What you need

There are 3 Main systems you need in place to be able to efficiently double down on your outliers:

1. Growth Tracker

This is a sheet which breaks down the key components of your best performing videos and should be updated by a member of your content team every 30 days. It primarily works best for tracking which TOF Content drives the most reach.

2. ICP Tracker

This tracks which videos are bringing in ICP followers allowing you to build an audience of qualified buyers. It primarily works best for tracking which MOF Content drives the most conversions.

3. Average View Count

Calculate the average number of views you generate per video so you can determine which videos are outliers and which videos are simply underperforming. This will allow you to clearly compare the difference between the two.

Here you can access the templates for the [Growth Tracker](#) and [ICP Tracker](#).

Overview

The goal of this section is to identify your winning videos, understand exactly why they won, and turn each one into multiple new videos that follow the same proven framework.

Step 1: Track the Data

Refer back to your Growth Tracker & ICP Tracker and pinpoint your best performing videos.

Ideally, find outliers that have both generated views and attracted ICP followers as these will be your golden formats.

Step 2: Deconstruct the Outlier

Now you need to actually understand WHY the video performed.

Take each outlier and run it through the **Deconstruction Framework**. Seven layers, every time:

1. The Format

This is the way the creator actually delivers the message. For example: Raw Talk iPhone Video or Tier List

2. **The Hook**

This is the highest lever you can pull to determine whether a video goes viral.

Identify the 3 Types of Hooks: a visual hook (thumbnail or opening frame), a text hook (bold first line of copy), or a verbal hook (opening spoken line)

3. **The Emotion**

What emotional trigger does the video activate?

Aspiration (viewers want what the creator has) Curiosity (they need to know how it ends), or Controversy (it challenges a common belief)

4. **The CTA & Payoff**

What action it makes the viewer take.

Does it prompt a strong opinion in the comments? Does it make you save it, share it, or follow?

5. **The Shareability Factor**

Shares are the most valuable metric, because the algorithm is designed to keep people on the platform.

Does it say something the viewer wishes they'd said? Does it make a bold claim the viewer wants to prove or disprove?

6. **The Proof Layer**

What makes the viewer believe the claim?

Is there a visible result shown (revenue, physique, outcome) with a specific number, date, or metric?

The easiest way to do this is a payment dashboard or a message from a client.

7. **The Trend Layer**

Is it using a trending audio, format, or phrase? Does it reference a news event, meme, cultural moment, or topic people are actively searching for?

Tapping into trends increases your TAM, because you start appealing to audiences outside your niche.

Write the answer to all seven down for each of your outlier videos. If you cannot articulate why it won, you cannot repeat it.

Step 3: Create Iterations

An iteration is a small adaptation of an already-proven concept, so you generate the same result, if not better.

This is exactly how we turn one proven video into a backlog of new ones. Change one variable at a time:

1. Hook Iteration

Same topic, same format, new hook. You already know the topic resonates, so all you are doing is testing a new entry point.

For example: a Bold Claim, a Direct Question, or a Story Opener.

2. Angle Iteration

There are 5 angles you can take when scripting:

Controversy → challenge a conventional belief in your niche.

Case Study → prove the concept through a real result.

Step-by-Step → break down the process behind the original insight.

Reaction → react to a common belief, mistake, or trend.

Storytelling → use your own journey to embody the principle.

3. Format Iteration

Delivering the same message with different visuals, for example: a Raw Talk iPhone video versus a Black Border Talking Head video.

Be mindful of which format you choose and how it links back to the messaging: the format carries a tone, and the wrong tone kills a strong script.

Quick checklist

Run this every 30 Days. Every answer should be yes.

- Growth Tracker filled out with this month's outliers (3-5x your average) by the Content Team?
- ICP Tracker filled out daily by the Appointment Setter, with every ICP follower mapped to a video?
- Have you selected up to 10 outliers to iterate on?
- Has every one of those been deconstructed across all 7 layers (Format, Hook, Emotion, CTA & Payoff, Shareability, Proof, Trend)?
- Is the WHY written down, not just held in someone's head?
- Does each iteration change only ONE variable (hook, angle, or format)?
- Are the iterations briefed into the pipeline with an editor assigned?
- Are you judging results on ICP followers, not only views?
